# Start to extract SAP and Oracle data in just two minutes

The faster you make a decision, the quicker the result. So goes the logic. Unfortunately, most data stored in mission-critical source systems is inaccessible and not ready for decision-makers to use – until now.

Rosslyn Analytics has developed the second generation of its award-winning RAPid Extract Studio, one of the most popular tools to extract data from SAP and Oracle. The app is so quick and easy-to-use that you can start to automatically extract data in just two minutes. No coding. Pure automation.

In three basic steps, you will have SAP and Oracle data in your hands, ready for data preparation in our RAPid Big Data Cloud Analytics Platform which features self-service data integration, cleansing and enrichment tools all in one place.

RAPid Extract Studio

SAP® Certified
Integration with SAP NetWeaver®

Start to extract SAP and Oracle data in just three simple steps:

1 Download the data extraction agent

2 Select the data you want to extract

3 Start to securely extract the data in minutes

❝❞

Rosslyn Analytics has developed an incredibly easy-to-use tool that in minutes automatically extracts and combines together disparate data – financial, purchasing and master data – into one source for analysis. All I had to do was to download the extraction app onto my desktop, log into my SAP system and click run. We had access to the analytics within the hour.
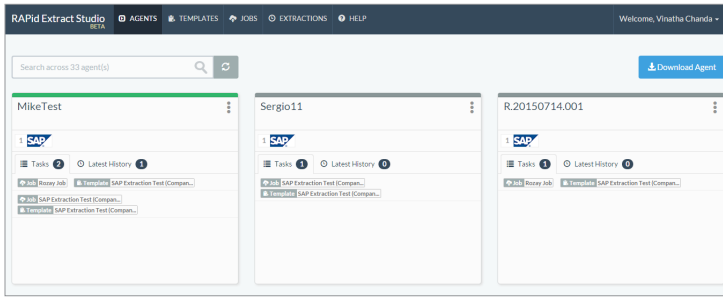

David Cowling,
Head of SAP & Finance Systems,
University of Warwick

Product Benefits

Eliminate costly and time consuming manual data extraction processes

Obtain 100% data integration faster than traditional tools

Easily create, define and control multiple data extractions on multiple instances in multiple locations locally

Generate a greater return on your SAP and Oracle investments by monetizing your existing data assets

Accelerate data preparation by loading data in the RAPid Big Data Cloud Analytics Platform for real-time automation and transformation
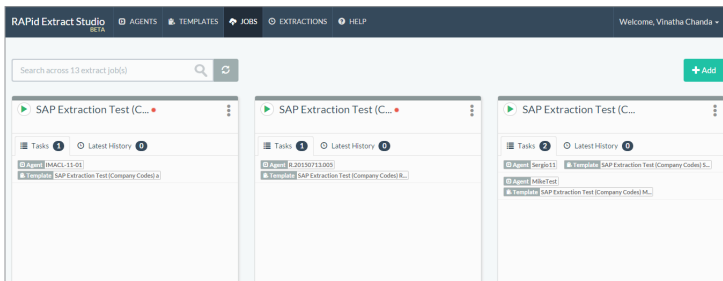

Product Features

Integrated scheduling of automated data extractions

Conduct audit of data extractions

Industry standard encryption and security

Growing library of pre-defined data extraction templates for FI, AP, AR, HR and more

Access to all SAP ERP tables including database views, pooled tables, and cluster tables

Agents' view

List of templates

Extraction jobs' view

Completed extractions view

Accelerate Data Preparation

Certified by SAP and Oracle, RAPid Extract Studio is designed for technical and business users seeking to accurately and comprehensively integrate, cleanse and enrich data for visualization and analysis outside of the SAP and Oracle environment.

Leveraging our market-leading experience, our platform can provide new insights by automation and transformation of raw data into actionable information. RAPid Big Data Cloud Analytics Platform is a one-stop destination for organizations seeking to finally centralize disparate data sources into one unified view for continuous enhancement by business decision-makers.

The platform, which can be deployed in minutes, features cutting-edge technologies including human-driven machine learning tools that make sense of and organize data faster than traditional solutions.

Clients generate an ROI in just eight weeks using our platform.
